Gypsum Worksheet Notes

Data Sources

Sources of data for the gypsum worksheet are the mineral statistics publications of the U.S. Bureau of Mines and the U.S. Geological Survey—Minerals Yearbook (MYB) and its predecessor, Mineral Resources of the United States (MR); and the Mineral Commodity Summaries (MCS) and its predecessor, Commodity Data Summaries (CDS). The years of publication and corresponding years of data coverage are listed in the References section below. Blank cells in the worksheet indicate that data were not available.

Reported Production

Total production data for gypsum are the sum of mine production and byproduct production. Data are reported in the MR and the MYB.

Reported Imports

Import data include crude gypsum only; ground and calcined gypsum, plaster of Paris, and Keenes cement are not included. Data are reported in the MR and the MYB.

Reported Exports

Export data prior to the year 1922 are not available. For the years 1922–27, data include all gypsum exports. Data for the years 1928–48 and 1985–2002 are crude gypsum exports only. Exports data for the years 1949–84 are mixed. They include crude, crushed, ground, calcined gypsum and plasters exports. Data are reported in the MR and the MYB.

Reported Stocks

Data are crude gypsum producer stocks as of end of year December 31. Stock data prior to the year 1950 are not available. Data are reported in the CDS, MCS, MR and the MYB.

Reported or Estimated Apparent Consumption

Apparent consumption data are not available prior to 1954. For those years data are estimated using the following equation:

APPARENT CONSUMPTION = CRUDE MINE GYPSUM PRODUCTION + BYPRODUCT GYPSUM PRODUCTION + CRUDE GYPSUM IMPORTS – EXPORTS \pm (STOCK CHANGES).

Apparent consumption data for the years 1954-77 are reported in the CDS. Data from 1978-2002 are reported in the MCS.

Estimated Unit Value (\$/t)

Unit value is defined as the value of 1 metric ton (t) of gypsum apparent consumption. The gypsum unit value data for the years 1900–2002 are estimated using the total sales unit value.

Estimated Unit Value (98\$/t)

The Consumer Price Index conversion factor, with 1998 as the base year, is used to adjust unit value in current U.S. dollars to the unit value in constant 1998 U.S. dollars.

Reported World Production

World production reports world mine production of crude gypsum. Data are not available prior to 1924. Data are reported in the MR and the MYB.
